Snow Routes General Information

SAVOY – In order to facilitate safe and efficient snow removal operations, and to prevent damage to vehicles parked on the street, the Village has designated various streets as snow routes. When weather conditions become severe enough, the Village will activate its snow routes.

The Village may activate its snow routes, if any of the following conditions occur:

1. Snow accumulation is forecast to be 3 inches or greater, or
2. Snow fall is observed to be 3 inches or greater, or
3. Any other conditions deemed to be hazardous, such as sleet and ice, are forecasted.

Notice of the activation and deactivation of the Village's snow routes will be made by press release that is posted to the Village's website, social media platforms, and sent to the media. Additional information regarding Village snow and ice response, including a detailed listing and map of the Village's snow routes can be found on the Village website:

- https://www.savoy.illinois.gov/snow_removal

The Village encourages drivers to provide plenty of room for snowplows to operate; monitor weather forecast; allow themselves extra time for travel; and consider avoiding travel during hazardous conditions.
